Sprint 2 Contributions — Fatmagul Dedek

Role: Developer (Frontend, Backend integration)

Period: 2026-09-28 to 2026-10-26

Summary

Set up the project's frontend from scratch, wired up GitHub Pages CI/CD, built the authentication and resume-upload flows, and integrated Supabase for auth and file storage.

Set up the submission modal front end, wired it to the apply button already made on the job search page. Set up the validation Toast pop-up to indicate the status of submission. Set up the backend log for applications with all the info as a row in Supabase.

Key Contributions

Application submission modal

- Developed the frontend modal
- Added resume and cover letter PDF drop box
- Added general information fields to attach to the submission
- Added auto fill for information fetched from user profile

Confirmation Banner, Toast Confirmation

- Added a pop-up banner on the job search page after submitting an application
- Notifies the status of the application (already applied, sent, failed, etc.)

Routing to application tracker

- Set up the job posting in the application tracker page
- Set up the backend data to be updated on the application tracker page
- Set up database to receive all information from the submission modal

Acceptance Tests

- Test for User Story

Files Primarily Owned / Authored

- `frontend/src/components/ApplyButton.tsx`
- `frontend/src/components/ApplyModal.tsx`
- `frontend/src/context/ToastContext.tsx`
- `frontend/src/lib/applications.ts`

Pull Requests Merged

PR	Description
#46	Apply modal and toast alerts

Tech Stack Touched

Next.js 16 (React), TypeScript, Supabase (Auth + Storage), GitHub Actions, GitHub Pages.
